Q: How to force anti-aliasing on a texture in OpenGL (without shader)? I'm using LWJGL3 with OpenGL3.3 The default texture formats (1.1, 2.0 and 3.0) use no anti-aliasing. How can I enable anti-aliasing on a texture? A: To be honest, there is nothing (and there is a reason why noone cares about the default rendering state of OpenGL) you can do on the GPU side. To be more precise, the default state of the rendering state of OpenGL does not correspond to the (default) state of a GPU. For example, with the default state of the rendering state, your texture does not have any AA, and only color. It is up to the video card to decide whether to apply AA or not. You can request to render textured quads with `AATextureType.MULTISAMPLE`, but that is rather a hack. You don't need to do this. And for the record, `AATextureType.MULTISAMPLE` implies using MSAA 2, which implies MSAA 4. And with MSAA 4, you can indeed get a nice AA effect with the default rendering state of OpenGL.

1. Field of the Invention The present invention relates to a vehicle seat for a vehicle such as an automobile or the like, and more particularly to a vehicle seat which is composed of a center seat for accommodating an adult and right and left back seats for accommodating passengers.

2. Description of the Related Art A vehicle seat is provided with a center seat which accommodates a passenger who is a center of the vehicle seating arrangement and which is secured to a vehicle floor. A pair of back seats for accommodating passengers are connected to the center seat so as to have a united back seat arrangement in a forwardly disposed direction of a vehicle body. In order to make it possible for a passenger to easily get in and out of the vehicle, it is desirable to reduce the distance between the center seat and each of the back seats.
