Jun 13, 2563 BE Mathematica keygen for v6.0.1 windows Edgediso the wolfram research v6.0.1 edg . A: I have had similar issues. In general Mathematica is very picky about the exact version numbers that it requires. Usually there is a patching to the build somewhere around version 8 or 9. In that case you can fix it by installing the newer version and copying the files from the installation to the newer version. Edit: Another way would be to go the other way around. Make sure that the files you are copying are from the version you run. Usually the Mathematica setup or your menu.lst lists the version.
