I'm very new to web development and I can't figure out where to start. I've seen some videos on how to make a search bar, but they are too simplistic. Here is my current search bar code: CSS: .searchBarText { width: 200px; font-size: 16px; font-weight: 400; color: #9c9c9c; margin: 15px; } A: Two possible solutions: Add an input. This solution is simple, and it's the approach used by Google and other search engines. Option 2: Create a div. Similar to the previous solution, but with the extra content.

I'm going to be receiving an error: this.state.profile.firstname is undefined. I know I can do something like: var firstname = this.state.profile.firstname but we want to have one variable for the name and then use it. A: React class is the best way to use in react project, because this components should be reusable as much as possible and this will improve performance. It's just syntax issue, use props as follows: `L e t s (u) = - u * * 2 + 5 * u - 3 . L e t c b e s (4) . L e t k 2d92ce491b`
