TextEdit is a program which allows you to create and edit plain text documents (not saved in a word processor). \* The interface has a characteristic tree-like window structure that distinguishes it from other text editors. \* The program offers to set the text document's font, size, style, case, and paragraph line spacing. \* The file format is described by the extension: TXT for plain text files and HTM for HTML documents. \* Newer versions of the program include the ability to create other document formats, to include pictures, audio files and rich text, and to use references to other documents. Here's a compact and user-friendly text editor, ideal for quick and easy file preparation. It is easy to use and is the ideal editor for beginners who may require simple text editing. Notes: - Search options - Add, Cut, Copy, Paste, Replace and Paste XML are supported. - You can also paste text from another editor. - If text is the same, then you can delete/cut/move the text. - Scrolling is supported. - The results can be saved as a TXT file. - The default font is 11-points. - You can set the file format to be: TXT, RTF, HTML, and Plain text
