

# When Should You Use High Pressure Water Jetting?

Clogged drains and slow-moving pipes are common problems, but not every issue requires heavy-duty cleaning. So, when is **high pressure water jetting** the right choice?

## Signs You Need Jetting

- Frequent drain clogs that return quickly.
- Slow-draining sinks, showers, or toilets.
- Bad odors coming from your drains.
- Tree root intrusion in sewer lines.
- Heavy grease buildup in commercial kitchens.

## Preventive Maintenance

Jetting isn't just for emergencies. Many property owners schedule it regularly to keep systems running smoothly and prevent costly breakdowns.

## Residential vs. Commercial Needs

Homeowners may use jetting every few years, while restaurants or large facilities often need it more frequently due to grease and waste buildup.

## Why Professional Service is Key

DIY methods often push blockages deeper or damage pipes. Professionals like Black Diamond Septic Pumping use specialized equipment to deliver safe and thorough cleaning.

## Conclusion

If your drains keep clogging or you notice unpleasant odors, high pressure water jetting may be the solution you need. It restores flow and extends the life of your system.
