

# Vegetables Export of Brazil: Trends and Insights of 2024

Vegetables, as essential commodity for food security, nutrition, and industrial food processing, have been a top priority for global traders due to uneven agricultural conditions and seasonal supply and demand fluctuations. The specific commodity, being a key input for frozen foods, canned goods, and dehydrated mixes, has benefited the overall trade bar of the global market. The trade liberalization and agreements, along with the growing global demand for healthy diets, have maintained the upward trajectory.

**Brazil Import Data** says, the country in South America sharing borders with Argentina and Bolivia has recorded itself as a leading exporter of vegetables in the international trade market due to the market access diplomacy and the export promotion programs initiated by the government authorities. Due to the technological evolution of the farming industries and the higher crop production rate, the export trade value of vegetables from Brazil has increased at a staggering rate of 472 million US dollars in 2024. The tax and export incentive schemes initiated by the government authorities, and the subsidized loans and investment plans, are considered beneficial for the overall trade. Subscribe to Import Globals, the leading Brazil import export trade provider, to stay updated with the latest information regarding the export of the nation via the Brazil trade data.

## GOVERNMENT INITIATIVES SUPPORTING THE VEGETABLE EXPORT OF BRAZIL IN 2024

The Plano Safra, a rural credit and agricultural investment program organized by the government authorities, has introduced low-interest credit and investment plans for horticulture. It has helped the domestic vegetable producers improve their yield and quality. The Programa Nacional de Fortalecimento Agrícola Familiar Harvest Plan has improved its access to credit for modernization and export readiness.

It has enabled a higher quality for export markets to stay competitive in the global trade. The market access expansion via MAPA has raised the export potential while negotiating the export-oriented horticulture trends of the global trade. Bio-Input Sustainable Agriculture Regulation has helped the authorities raise compliance with the quality and marketability of the products manufactured for export abroad, while facilitating the export growth rate.
